BALLISTIC TESTING LAB

Kyungchang Industry (KCI) operates its own Ballistic Testing Lab to ensure the high quality of the ballistic items. KCI also possesses Machining Center, Laminator, Press, and Molding Machine to customize the items to meet the customer satisfaction.

MACHINING CENTER

A machine for Die and Mold with highly rigid box-way feed system equipped with unique air floating system and in-house designed spindle. Cooling of the spindle and frames minimizes thermal displacement to ensure high precision during long-time machining.

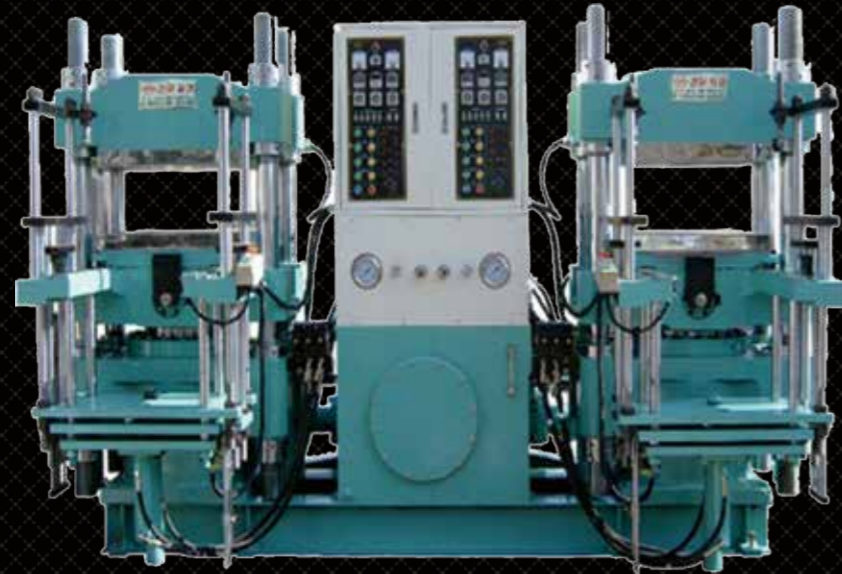

LAMINATOR

A machine producing a material in multiple layers, so that the composite material achieves improved strength, stability, sound insulation, appearance, or other properties from the use of the differing materials.

300 TON AUTO-HYDRAULIC PRESS

A machine press using a hydraulic cylinder to generate a compressive force. It uses the hydraulic equivalent of a mechanical lever.

80~300 TON SEMI H TYPE SINGLE CRANK PRESS

A press with the frame of the high-strength single side frame steel platen and the side frame with improved dynamic precision and resolution for the crack in the C-frame processing.

130~260 TON INJECTION MOLDING MACHINE

A machine producing parts by injecting molten material into a mould, or mold. Injection moulding can be performed with a host of materials mainly including metals (for which the process is called die-casting), glasses, elastomers, confections, and most commonly thermoplastic and thermosetting polymers.

250 TON VERTICAL INJECTION MOLDING MACHINE

A low height table type vertical injection molding machine with vertical clamping & injection part with rotary table securing easy mold setting and working stability.
